

# DIGITAL MODULATION AND CODING

---

Stevens G. Wilson

# *Contents*

*Preface* xv

## *1 An Overview* 1

- 1.1 A Framework for Digital Communications 3
  - 1.1.1 Sources, Channels, and Limits to Communication 3
  - 1.1.2 Operations in the Digital Transmission Pathway 6
  - 1.1.3 Modulation and Coding 8
- 1.2 Historical Notes 12
- 1.3 Outline of Book 14
- Bibliography 15

## *2 Fundamentals of Probability and Information Theory* 18

- 2.1 Probability 19
  - 2.1.1 Conditional Probability 22
  - 2.1.2 Independence 24
- 2.2 Random Variables: Discrete and Continuous 24
  - 2.2.1 Discrete Random Variables 25
  - 2.2.2 Continuous Random Variables 27

2.2.3	Multidimensional Random Variables or Random Vectors	33
2.2.4	Conditional Distributions and Densities	35
2.2.5	Independence of Random Variables	37
2.2.6	Transformations of Random Variables	38
2.3	Expectations and Moments	42
2.3.1	First and Second Moments	43
2.3.2	Correlation and Covariance	44
2.3.3	Characteristic Functions	47
2.4	Probability Bounds and Limit Theorems	49
2.4.1	Bounds Based on First and Second Moments	49
2.4.2	Chernoff Bounds	50
2.4.3	Sequences, Sums, and Laws of Large Numbers	53
2.4.4	Central Limit Theorem	55
2.5	Stochastic Processes	57
2.5.1	Wide-sense Stationarity, Autocorrelation Function, and Power Spectral Density	60
2.5.2	Stochastic Processes in Linear Systems	65
2.5.3	Time Averages versus Ensemble Averages	67
2.5.4	Karhunen–Loeve Series Representation for Random Processes	69
2.5.5	Markov Models	73
2.6	Statistical Decision Theory	76
2.6.1	Minimum Probability of Error Policies	77
2.6.2	Irrelevant Data and Sufficient Statistics	80
2.7	Concepts of Information Theory for Discrete Alphabets	88
2.7.1	Entropy for Discrete Random Variables	89
2.7.2	Joint and Conditional Entropy	93
2.7.3	Mutual Information	93
2.7.4	Discrete Channels and Channel Capacity	95
2.7.5	Sequence Transmission	98
2.7.6	Converse to the Noisy Channel Coding Theorem	100
2.8	Coding of Discrete Information Sources	104
2.8.1	Block Source Codes	105
2.8.2	Block- to Variable-length Encoding	107
2.8.3	Extensions to Discrete Markov Sources	112
2.9	Information Theory for Continuous Random Variables and Processes	113
2.9.1	Scalar Variable Case	114
2.9.2	Vector Gaussian Channel Case	117
2.9.3	Waveform Channel Case	119
Bibliography		123
Exercises		125

### **3 Modulation and Detection 141**

<b>3.1 A Transmission Model 142</b>	
3.1.1 Digital Modulation 143	
3.1.2 Channel Filtering 145	
3.1.3 Channel Gain and Fading 147	
3.1.4 Noise Model 151	
3.1.5 Model Limitations 151	
<b>3.2 Signal Spaces 152</b>	
3.2.1 Orthonormal Basis Sets 153	
3.2.2 $M$ -ary Signal Constellations 155	
<b>3.3 Single-symbol Detection of Known Signals in AWGN 161</b>	
3.3.1 Error Performance for General Binary Signals in AWGN 171	
3.3.2 Performance Bounds for $M$ -ary Signaling 175	
3.3.3 Detection of $M$ -ary Orthogonal, Biorthogonal, and Simplex Modulation 178	
3.3.4 Detection of $M$ -ary Phase Shift Keying ( $M$ -PSK) 185	
3.3.5 $M$ -ary Amplitude Modulation and Quadrature Amplitude Modulation 191	
3.3.6 Multidimensional Lattice-based Constellations for the AWGN Channel 196	
3.3.7 Summary of Energy and Spectrum Efficiency of Modulation Techniques 201	
3.3.8 Extension to Single-symbol Transmission on Nonideal Channels 203	
<b>3.4 Noncoherent Demodulation of Carrier-modulated Signals 204</b>	
3.4.1 Structure of Optimal Noncoherent Demodulator 205	
3.4.2 Performance Analysis for Noncoherent Demodulation of Binary Orthogonal Signals 211	
3.4.3 Performance Analysis of Noncoherent Detection of $M$ -ary Orthogonal Signals 213	
<b>3.5 Phase Comparison or Differentially Coherent Demodulation of PSK 216</b>	
3.5.1 Structure of Optimal Demodulator 217	
3.5.2 Performance Evaluation for $M$ -DPSK 220	
<b>3.6 Performance on the Slow, Nonselective Rayleigh Fading Channel 224</b>	
3.6.1 Binary Signaling with Rayleigh Fading 225	
3.6.2 $M$ -ary Orthogonal Signaling with Noncoherent Detection 230	
3.6.3 $M$ -ary PSK and DPSK 231	
<b>3.7 Power Spectra of Digitally Modulated Signals 233</b>	
3.7.1 Overview on Power Spectrum and Some Cautions 233	
3.7.2 Power Spectrum for General Memoryless Modulation 235	
3.7.3 Baseband Pulse-amplitude Signaling 238	
3.7.4 Spectra for $M$ -PSK and $M$ -QAM Modulation 241	
3.7.5 Asymptotic Behavior of Power Spectrum; Role of Dimensionality 244	
3.7.6 Power Spectrum for Markov-input Modulation 247	
<b>3.8 Spread-spectrum Modulation 247</b>	
3.8.1 Direct Sequence Spread Spectrum 248	

3.8.2 Frequency-hopping Spread Spectrum	256
<b>Appendix 3A1: Asymptotic Performance of <math>M</math>-ary Orthogonal Signals</b>	<b>265</b>
<b>Appendix 3A2: Lattices</b>	<b>268</b>
Some Familiar Examples	268
Algebraic and Geometric Notions about Lattices	269
Communication Efficiency	273
Still Better Lattices	276
Finding the Closest Lattice Point	277
Reprise	279
<b>Appendix 3A3: Derivation of Power Spectrum</b>	<b>279</b>
<b>Bibliography</b>	<b>284</b>
<b>Exercises</b>	<b>286</b>
<b>4 Channel Coding and Its Potential</b>	<b>300</b>
4.1 A Taxonomy of Codes	301
4.2 Introduction to Block Coding and Optimal Decoding	304
4.3 Two-codeword Error Probability and $R_0$	310
4.3.1 Ensemble Average Performance for Two-codeword Codes	315
4.3.2 Extension to Discrete-input, Continuous-output Channels	318
4.3.3 Generalizations	321
4.4 Probability of Error with Many Codewords and the Channel Coding Theorem	322
4.4.1 Code Ensembles and a Simple Ensemble Bound on Performance	322
4.4.2 Generalized Upper Bound for a Specific Code with Many Codewords	325
4.4.3 Properties of the Error Exponent and a Coding Theorem	328
4.4.4 Summary of Coding Potential for Block Codes on DMCs	331
4.4.5 Remarks for Trellis Codes	335
4.5 Implications of $R_0$ and $C$ for Binary Signaling on AWGN and Channels	336
4.5.1 $R_0$ and $C$ Considerations for Binary Signaling, AWGN Channel, and Hard Decisions	337
4.5.2 Binary Signaling, Unquantized Demodulation	341
4.5.3 Binary Signaling with Soft-quantized Demodulation	344
4.5.4 Summary for Binary Transmission, AWGN Channel	346
4.5.5 $R_0$ and $C$ with $M$ -ary Modulation, AWGN Channels	347
4.6 Capacity and $R_0$ for the Rayleigh Fading Channel	356
4.6.1 Coding Potential for Binary Signaling on the Rayleigh Channel	357
4.6.2 $M$ -ary Noncoherent Transmission on the Rayleigh Channel	363
4.6.3 Channel Capacity for Bandwidth-efficient Modulation on the Rayleigh Channel	367

4.7	Further Studies on Coding Potential	370
4.7.1	Photon Counting (or Direct Detection) Optical Communication	370
4.7.2	Block Interference Channels	376

Appendix 4A1: Decoding on Channels with Memory	379
--	-----

No Side Information	380
Perfect Side Information	381

Bibliography	381
--------------	-----

Exercises	383
-----------	-----

## 5 Block Coding 393

5.0	The (7, 4) Binary Hamming Code	395
-----	--------------------------------	-----

5.1	Algebra of Finite Fields	397
-----	--------------------------	-----

5.1.1	Polynomials over Fields and Extension Fields	399
-------	--	-----

5.1.2	Computation in Finite Fields	405
-------	------------------------------	-----

5.1.3	Discrete Fourier Transforms over Finite Fields	407
-------	--	-----

5.2	Linear Block Codes	411
-----	--------------------	-----

5.2.1	Structure of Linear Codes over $\text{GF}(q)$	411
-------	---	-----

5.2.2	Distance Properties of Linear Codes and Error Protection Properties	416
-------	---	-----

5.2.3	Decoding of Linear Block Codes (Maximum Likelihood and Algebraic)	421
-------	---	-----

5.2.4	Performance Measures for Algebraic Decoding	425
-------	---	-----

5.2.5	Hamming Codes over $\text{GF}(q)$	428
-------	-----------------------------------	-----

5.2.6	Reed–Muller Codes	429
-------	-------------------	-----

5.3	Bounds on Minimum Hamming Distance for Block Codes	432
-----	--	-----

5.3.1	Hamming (Sphere-packing) Bound	432
-------	--------------------------------	-----

5.3.2	Singleton Bound	435
-------	-----------------	-----

5.3.3	Plotkin Bound	436
-------	---------------	-----

5.3.4	Gilbert Bound	437
-------	---------------	-----

5.3.5	Varshamov Bound	439
-------	-----------------	-----

5.3.6	Asymptotic Forms of the Varshamov–Gilbert and Hamming Bounds	440
-------	--	-----

5.3.7	Channel Capacity and the Coding Theorem Revisited	441
-------	---	-----

5.4	Cyclic Codes	442
-----	--------------	-----

5.4.1	Structure of Cyclic Codes	442
-------	---------------------------	-----

5.4.2	Encoding of Cyclic Codes	450
-------	--------------------------	-----

5.4.3	BCH Codes	455
-------	-----------	-----

5.4.4	Cyclic Hamming Codes	462
-------	----------------------	-----

5.4.5	Reed–Solomon Codes	463
-------	--------------------	-----

5.5	Decoding of Cyclic Codes	465
-----	--------------------------	-----

5.5.1	General-purpose Decoding of Cyclic Codes over $\text{GF}(q)$	466
-------	--	-----

5.5.2	Algebraic (Errors Only) Decoding of BCH Codes and RS Codes	470
-------	--	-----

5.5.3	Errors-and-Erasures Decoding	482
5.5.4	ML and Near-ML Decoding	486
<b>5.6</b>	<b>Modifying Block Codes</b>	<b>489</b>
5.6.1	Extending and Puncturing	490
5.6.2	Expurgation and Augmentation	491
5.6.3	Lengthening and Shortening	492
<b>5.7</b>	<b>Error Detection with Cyclic Codes</b>	<b>494</b>
<b>5.8</b>	<b>Layered Codes: Product Codes and Concatenated Codes</b>	<b>497</b>
5.8.1	Product Codes	497
5.8.2	Concatenated Codes	500
<b>5.9</b>	<b>Interleaving for Channels with Memory</b>	<b>502</b>
5.9.1	Block Interleaving	505
5.9.2	Convolutional Interleaving	507
<b>5.10</b>	<b>Performance Evaluation for Block Codes</b>	<b>510</b>
5.10.1	AWGN Channel, Hard-decision Decoding	510
5.10.2	Soft-decision (ML) Decoding, AWGN Channel	518
5.10.3	Hard-decision Decoding, Rayleigh Channel	522
5.10.4	Soft-decision Decoding, Rayleigh Channel	524
<b>5.11</b>	<b>Power Spectrum of Conventional Block Coded Modulation</b>	<b>526</b>
<b>5.12</b>	<b>Block Coding for Band-limited Channels</b>	<b>528</b>
5.12.1	Multilevel Coding	529
5.12.2	Simple LSB Coding and Hard-decision Decoding	531
5.12.3	Multilevel Codes for Fading Channels	532
<b>Appendix 5A1:</b>	<b>Data Scramblers</b>	<b>532</b>
<b>Bibliography</b>		<b>534</b>
<b>Exercises</b>		<b>538</b>

## **6 Trellis Codes** 550

<b>6.1</b>	<b>Description of Convolutional Codes</b>	<b>552</b>
6.1.1	Binary Convolutional Codes	552
6.1.2	Nonbinary Convolutional Codes	561
6.1.3	Parity Check Matrices	562
6.1.4	Inverse Circuits	563
6.1.5	State Diagrams and Trellises	564
<b>6.2</b>	<b>Hamming Distance Measures for Convolutional Codes; Various Good Codes</b>	<b>570</b>
6.2.1	Distance Definitions	570

6.2.2	Bounds on Free Distance	575
6.2.3	Optimal Free Distance Codes	576
6.2.4	Punctured Convolutional Codes	580
6.2.5	Optimal Distance Profile Codes	584
6.3	Maximum Likelihood Decoding of Convolutional Codes	584
6.3.1	Maximum Likelihood Sequence Decoding (Viterbi Algorithm)	585
6.3.2	Implementation Issues	591
6.4	Error Probability with Maximum Likelihood Decoding of Convolutional Codes	595
6.4.1	Performance of Binary Convolutional Codes on Nonfading Channels	601
6.4.2	Generalization to Bhattacharrya Expression	608
6.4.3	Nonbinary Convolutional Codes and Noncoherent Detection	608
6.4.4	Fading Channel Performance	610
6.5	Other Decoding Procedures: Sequential Decoding and Feedback Decoding	611
6.5.1	Sequential Decoding	611
6.5.2	Feedback Decoding	616
6.6	Trellis Coding with Expanded Signal Sets for Band-limited Channels	619
6.6.1	Set Partitioning	620
6.6.2	Hand Design of Codes	624
6.6.3	Trellis Codes for Fading Channels	634
6.7	Continuous-phase Modulation	637
6.7.1	Signal Description	637
6.7.2	State Representation	641
6.7.3	Modular Implementations	645
6.7.4	Description of CPM as Memoryless Modulation Preceded by Coding	645
6.7.5	Power Spectra of CPM Modulation	647
6.7.6	Coherent Decoding of CPM	647
6.7.7	Related Topics in CPM	652
Appendix 6A1: Numerical Evaluation of Transfer Function Bounds		655
Bibliography		657
Exercises		662
